# The IBM + VMware Difference

What makes IBM Cloud the best choice for extending your VMware workloads to cloud?

- 1 Unmatched Expertise and Experience
- 2 Client Choice & Flexibility
- 3 Global Geographic Reach
- 4 Security for all your Workloads
- 5 Migration made Easy

IBM has **10+**

years of partnership with VMware and thousands of VMware trained professionals who provide deep expertise in managing, designing and deploying VMware infrastructure

IBM Cloud is VMware Partner of the year-2017

Tailor your environment with different compute, storage and network options or deploy from two automated configurations: VMware vCenter Server and VMware Cloud Foundation.

**Bring your own VMware license or utilise monthly VMware licensing provided by IBM.**

The choice  
is yours.

Move workloads between nearly **60** global data centers — with no migration costs between locations — to meet your geo regulations, data latency concerns or backup and recovery needs.

Global locations for your global business

Fearlessly manage your workloads on a cloud that meets worldwide compliance qualifications.

## Never compromise your data

with the ability to determine scheduling of patches and updates yourself.

Deploy VMware in the IBM Cloud with the same control as on-premises. Clients have full administrator and hypervisor access with no changes to existing tooling.

**Leverage your existing investment in VMware training and skill sets.**

# What Next?

Move VMware workloads from on-premises to the IBM Cloud seamlessly, using a common platform for management, networking and security.

## Get an estimate of your TCO

IBM Cloud offers a cost-effective approach to moving your VMware workloads to the cloud—but how does it compare to keeping workloads on-premises? Input your organisational needs to get an initial estimate on how much IBM Cloud for VMware Solutions can save you.
